

Model: BF-600-V-Bank**FEATURES**

Construction facilitates the insertion of double row filters that extend from the left to the right across the canopy length to ensure an even flow of air over the entire length. Seams are continuous throughout the length and width (there are no upstanding or protruding joints). All the joints are welded together. Ground and polished to the original material texture. The use of bolts, nuts and rivets are avoided. All sharp edges and burs are cleaned and polished to ensure safety of cleaning personnel. Internal crevices between canopy joints are filled with a polyurethane or silicone sealer.

FILTERS:

Impingement baffle type filters manufactured of 0.7mm grade 430 st steel. Filters are easily fitted without the use of tools. They slide into the position provided by the filter housing frame. When fitted in position the filter also acts as a fire barrier. The filters are self draining and do not block with grease when used for prolonged periods without cleaning intervals.

APPLICATION:

Extracts steam produced by present day catering equipment. Especially used over island type cooking equipment.

WORKING PRINCIPLES AND SCHEMATIC DRAWING

**Canopy Length
mm**

**Air Volume
m3**

1000	0.80
1200	0.96
